

# Do you have a problem with opioid pain medications?

The University of Auckland is conducting research about peoples' experiences with becoming addicted to opioid pain medications. We want to interview people using certain types of pain relief – either prescribed by a doctor or purchased over-the-counter from pharmacies.

We would like to find out about how your problems developed with opioid pain relief, what help you have looked for and what help you received – whether it was helpful or what would have been useful.

**A \$40 MTA or Westfield Voucher will be given to you at the interview.**

If you or someone you know is taking an opioid medication such as **morphine, codeine, oxycodone, fentanyl, methadone, DHC, pethidine, tramadol, Nurofen Plus® or Panadeine®** and are starting or have recently started treatment for opioid addiction, then this study may be of interest.

If you would like more information, please contact the researcher:
