

Step 1: Download DroidCam onto your mobile device

DroidCam turns your Android device into a webcam.

The app works with a PC client that connects the computer with your phone. Windows and Linux clients are available. Visit www.dev47apps.com on your computer to download, install, and get more info on usage.

Android Platform:
<https://play.google.com/store/apps/details?id=com.dev47apps.droidcam>

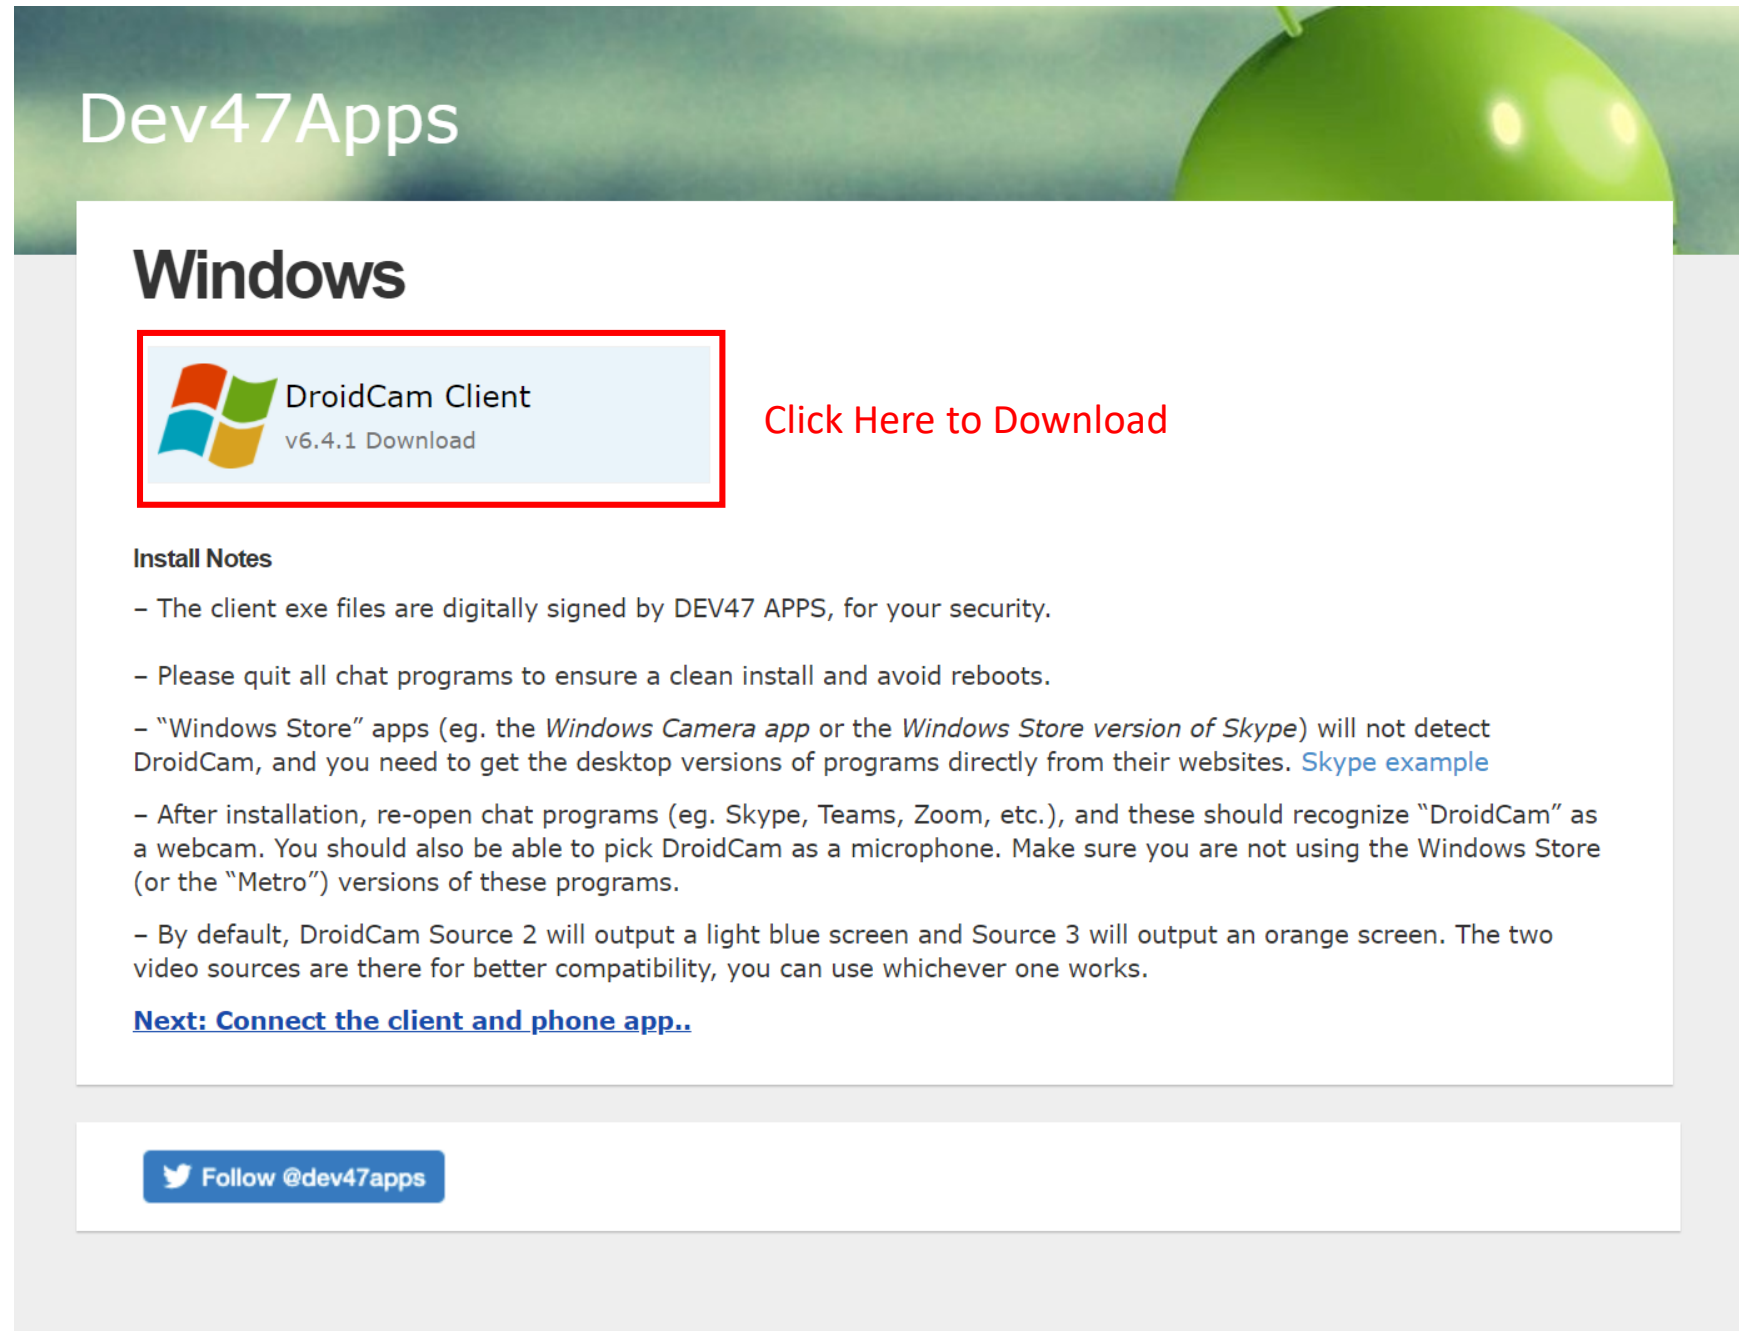

Use your phone as a webcam or as a dedicated camera for OBS Studio.

WEBCAM
 Chat using "DroidCam Webcam" on your computer, including sound and picture, by installing the DroidCam PC Client.

Apple Platform:
<https://apps.apple.com/us/app/droidcam/id1510258102>

Step 2: Download DroidCam onto your windows computer

Dev47Apps

Windows

 DroidCam Client
v6.4.1 Download

[Click Here to Download](#)

Install Notes

- The client exe files are digitally signed by DEV47 APPS, for your security.
- Please quit all chat programs to ensure a clean install and avoid reboots.
- "Windows Store" apps (eg. the *Windows Camera app* or the *Windows Store version of Skype*) will not detect DroidCam, and you need to get the desktop versions of programs directly from their websites. [Skype example](#)
- After installation, re-open chat programs (eg. Skype, Teams, Zoom, etc.), and these should recognize "DroidCam" as a webcam. You should also be able to pick DroidCam as a microphone. Make sure you are not using the Windows Store (or the "Metro") versions of these programs.
- By default, DroidCam Source 2 will output a light blue screen and Source 3 will output an orange screen. The two video sources are there for better compatibility, you can use whichever one works.

Step 3: Launch DroidCam on your PC and mobile phone

Step 4: Copy the IP address from your mobile phone to the PC
(Make sure you are using the same internet connection for both devices)

Step 5: Press "Start" and it will begin streaming
