Reuse means to use something again e.g. if you've got a plastic bag instead of throwing it out, reuse it!

You can reuse things at school by not throwing away paper if you make a mistake, and use the other side.

You can reuse at home by refilling bottles with the material it had before e.g. if you had a soap bottle fill it, fill it up with more soap.
Reduce means to get less of something, like less packaging or storage. Don’t by everything you want and just go around the shops picking up everything in your path!

You can reduce at school by using less paper or computers and use the whiteboard. (Not interactive)

You can reduce at home by not buying everything you want!

Recycle means to use it for something else e.g. you can give it to someone else (mostly to someone that is poor), use it for craft or make it into something else.

You can recycle at school by using boxes that you don’t need any more and give it away.

You can recycle at home by using things that you don’t need any more and turn them into craft.

Rethink means to think about your actions before you do something. So if you want to make a big bussness, but it involves factory working DO NOT DO IT!

You can rethink at school by not muck around with water.
