

How Does Mentos and coke React Together?

When you push Mentos into Coke it is a big reaction and it is a great science experiment!

After you push the Mentos into the Coke, it starts fizzing instantly. Then the coke erupts out of the top and up into the air. It shoots up like a rocket. The Coke fountain then goes down slowly and looks like a candy cane. The Mentos will stay at the bottom of the bottle. The experiment is finished.
