

Jupiter

- Jupiter is the largest planet in our Solar system.
- Jupiter is the fifth planet from the Sun.
- It is so big that more than 1300 Earths could fit inside it.
- Thick, colourful clouds of deadly poisonous gases surround Jupiter.
- At the centre of Jupiter is a rocky core.
- Jupiter is mostly made of a giant ball of gases.
- It is known as one of the 'gas giants' of space
- Jupiter's core is slightly bigger than Earth, but weighs about 20 times more.
- Surrounding the core is an ocean of liquid hydrogen
- One day on Jupiter is just under 10 hours long.
- Jupiter has many storms raging on the surface.
- You can see a big red spot which is actually a large storm or hurricane.
- Jupiter has a very strong magnetic field, you would weigh two and a half times as much as you would on Earth.
- Jupiter has many moons circling around it.
- Jupiter has at least 79 confirmed moons.
