

Setting out working is another important skill in Mathematics. Some students like to draw all over their work, while others have super skills at using equation editor. Here is a quality example of setting out working while attempting an extension level question by Lucy Goldman from 8MAT4:

The vertices of triangle RST are $R(-1, -1)$, $S(1, 3)$ and $T(3, 1)$.

- Find the exact length of each side of the triangle.
- What type of triangle is $\triangle ABC$? *Isosceles*
